

KRUTIK MHATRE

kahitokrutik@gmail.com | +91 90822 02088 | github.com/GlazyKahito | linkedin.com/in/krutik-mhatre

SKILLS

- Languages: Java, C, C++, Python, JavaScript, TypeScript
- Web Development: MERN Stack (MongoDB, Express.js, React, Node.js), Next.js, Tailwind CSS, HTML5, CSS3, GSAP, Motion
- AI/LLM Integration: Google Gemini API, Claude API, structured output with validation, prompt design for production features
- Databases: MongoDB, PostgreSQL (Drizzle ORM), SQLite
- Tools & Platforms: Git, GitHub, Vercel, Playwright, VS Code

EXPERIENCE

Founder, GLAZY (freelance web & SaaS agency)

2026 – Present

- Founded GLAZY, a freelance web and SaaS agency that designs and builds websites, web apps, SaaS products and AI features for businesses, from the first brief to launch on Vercel.
- Built the agency's site (Next.js 16, GSAP, Motion): a cinematic scene deck on 4K footage with a layered depth-poster opening, a 3D loader, and Mr. Nimbus, a guide grounded in the site's own data.

glazy-portfolio.vercel.app

Web Development Intern, Ediglobe

July 2026 – September 2026

- Mini project: built an internal delivery-exceptions dashboard (HTML, CSS, JavaScript) for a GreyAtom Logistics brief — dynamic filtering, ticket detail views, and a submission workflow to log, filter, and resolve exceptions by priority and status.
- Minor project: built CRM360, a full-stack MERN CRM (MongoDB, Express.js, React, Node.js) with a sales pipeline board, contact/deal tracking, and a notifications system, deployed to Vercel.

PROJECTS

NIYAM — AI Legal Research (team project)

lextemporal.vercel.app

- Co-built an AI legal research workspace for Indian lawyers: every drafted sentence is tied to the judgment paragraph it cites, and a deterministic temporal validity engine checks each authority against 22,914 amendment events across 883 acts.
- Runs offline on one laptop: hybrid retrieval over a 4 GB SQLite corpus (13.2M rows), NVIDIA NIM embeddings and reranking, Gemini drafting and hearing simulation. Final build of the LexTemporal prototype.

ScamShield

github.com/GlazyKahito/scamshield

- Built an AI security analyst (Next.js, TypeScript, Google Gemini API) that explains why a message or link looks risky and what to do next, instead of returning a bare verdict.
- Hardened the production pipeline with model fallbacks, retries, request timeouts, rate limiting, and input validation.

CLIMATIQ — Heatwave Decision Support

climatiq.vercel.app

- Built an AI-assisted heatwave decision-support platform for India (Next.js, PostgreSQL with Drizzle, MapLibre, Three.js): a 2D/3D district heat-risk command centre, 7-day forecasts for 36 states/UTs and 230 districts, human-approved Gemini/Claude advisories, a response CRM and a public portal.

HEATSYNC — Heatwave Response Engine

heatsync-mh.vercel.app

- Built a heatwave response engine for Maharashtra's 36 districts (Next.js, TypeScript, React Three Fiber, C) where hotspot ranking, heat zones, cross-border alert rings and relief staging each run on one of eight classic data structures, over 48,312 real ERA5 daily values, with a 3D map and 160+ unit tests.

EDUCATION

KJ Somaiya College of Engineering, Vidyavihar

2025 – 2029 (Expected)

B.Tech, Information Technology / Computer Science · Mumbai, Maharashtra
