

KRUTIK MHATRE

kahitokrutik@gmail.com | +91 90822 02088 | github.com/GlazyKahito | linkedin.com/in/krutik-mhatre

SKILLS

- Languages: Java, C, C++, Python, JavaScript, TypeScript
- Web Development: MERN Stack (MongoDB, Express.js, React, Node.js), Next.js, Tailwind CSS, HTML5, CSS3
- AI/LLM Integration: Google Gemini API, prompt design for production features
- Tools & Platforms: Git, GitHub, Vercel, VS Code

EXPERIENCE

Web Development Intern, Ediglobe

July 2026 – Present

- Mini project: built an internal delivery-exceptions dashboard (HTML, CSS, JavaScript) for a GreyAtom Logistics brief — dynamic filtering, ticket detail views, and a submission workflow to log, filter, and resolve exceptions by priority and status.
- Minor project: built CRM360, a full-stack MERN CRM (MongoDB, Express.js, React, Node.js) with a sales pipeline board, contact/deal tracking, and a notifications system, deployed to Vercel.

PROJECTS

LexTemporal

lextemporal.vercel.app

- Built an AI-powered legal research tool that traces every generated argument back to the specific judgment paragraph it rests on, checking authority against a matter's timeline.
- Implemented agent-driven workflows (search, draft, simulate, hearing prep) inside a project-based workspace.

ScamShield

github.com/GlazyKahito/scamshield

- Built an AI security analyst (Next.js, TypeScript, Google Gemini API) that explains why a message or link looks risky and what to do next, instead of returning a bare verdict.
- Hardened the production pipeline with model fallbacks, retries, request timeouts, rate limiting, and input validation.

DCN Virtual Lab — Network Design & Fault Diagnosis

[View on GitHub](#)

- Built a full DCN virtual lab covering all 8 course experiments: a drag-and-drop topology designer, a real packet-animation simulator (ICMP/TCP/UDP) with a Wireshark-style inspector, and interactive tools for subnetting, Hamming-code error correction, and TCP header analysis.
- Designed a rule-based fault-diagnosis engine covering 10 realistic multi-layer network faults, with a symptom → hypothesis → test → root-cause → verification workflow, assessments, and a mini-game.

Grove — Habit Tracker

grove-habit-tracker-krut1.vercel.app

- Designed and built a polished, animation-driven habit-tracking web app using JavaScript, Node.js, and TypeScript across the front end and back end.

EDUCATION

KJ Somaiya College of Engineering, Vidyavihar

2025 – 2029 (Expected)

B.Tech, Information Technology / Computer Science · Mumbai, Maharashtra
